GRANT SUPPORT

Currently ongoing grants:

1. Utah Center for Clinical and Translational Science (CCTS) Community-Initiated Translational Research Pilot Program - *Investigation of Community-Level Definitions of Mental Health, Mental Health Priority Areas, and Barriers to Care Across Diverse Communities: Development of a Framework for Culturally-Responsive, Evidence-Based Mental Health Intervention* (PI: Asnaani)
Funding Agency: NIH/NCATS
Role: Principal Investigator
Status: Data Collection
2. 1 R61 MH111907-01 - *Estrogen-induced changes in the neural mechanisms of PTSD symptom reduction* (PI: Milad)
Funding Agency: NIMH
Role: Major Co-Investigator/Key Personnel
Status: Data Collection
3. VA ORD I01 RX002699 Merit Grant Application - *Cognition and psychotherapy in PTSD: Mechanisms and functional outcomes* (PI: Scott)
Funding Agency: VA Rehabilitation Research and Development
Role: Co-Investigator
Status: Data Collection
4. Penn ALACRITY P50 Grant Application - *Financial incentives for CBT for Insomnia for patients with PTSD* (PI: Gooneratne)
Funding Agency: Penn Center for Health Incentives and Behavioral Economics/Center for Mental Health Policy and Services Research

Role: Co-Investigator

Status: Protocol development and study procedures set-up

Recently concluded grants:

1. 1U01MH109991-01 - *Dimensional connectomics of anxious misery* (PI: Sheline)
Years supported: 04/01/16 – 04/30/18
Funding Agency: NIMH
Role: Co-Investigator
2. W81YWH-12-2-0116 - *Implementation of Prolonged Exposure in the Army: Is Consultation Necessary for Effective Dissemination?* (PI: Foa)
Years supported: 06/01/15 – 09/29/17
Funding Agency: Department of Defense
Role: Clinical Supervisor/Conducting site visits to military posts
3. 2R01 MH045404-20 - *Attaining and Maintaining Wellness in OCD* (PI: Foa)
Years supported: 09/01/13 – 07/31/17
Funding Agency: NIMH
Role: Independent Evaluator
4. W81XWH-08-2-0111 PT074199P19 - *Massed vs spaced trials for prolonged exposure for PTSD* (PI: Foa)
Years supported: 09/01/13 – 07/31/17
Funding Agency: Department of Defense
Role: Data analysis/research manager
5. 8UL1TR000003 – *Testing and dissemination of screening measure for PTSD in youth* (PI: **Asnaani**)
Years supported: 07/01/14 – 12/31/15
Funding Agency: Community Engagement and Research Core, University of Pennsylvania
Role: Principal Investigator
6. R01- DA023507-01A1– *Treatment of smoking in individuals with PTSD* (PI: Foa)
Years supported: 09/01/13 – 05/31/14
Funding Agency: NIDA
Role: Independent Evaluator/Data Manager

Recently concluded projects:

1. *REDCap Moderators and Mediators in CBT study* (PI: **Asnaani**)
Years active: 2015 – 2019
Description: Examined proposed mechanisms of change over course of empirically-supported psychotherapies for anxiety disorders, OCD and PTSD via an online electronic capture system (REDCap) for all patients seeking treatment at the Center for the Treatment and Study of Anxiety (CTSA) at Penn. Assessed a range of self-reported mechanisms and symptom change across all diagnoses at pre-, mid-, and

- post-treatment from both patients and clinicians as a new research practice fully integrated into standard clinical practice.
2. *Mechanisms of Treatment in the Open Clinic Study (MTOCS)* (PI: **Asnaani**)
Years active: 2016 – 2019
Description: Extended previous study started in 2015 by examining objective measures of proposed mechanisms of psychotherapy outcome in patients seeking treatment for OCD, PTSD, and primary anxiety disorders. Patients were given computer-based task batteries (e.g., implicit association tasks, distress tolerance, emotion regulation practice with psychophysiological measurement, computerized behavioral intolerance to uncertainty decision-making tasks) that were dependent on their primary diagnosis, based on hypothesized mediators of treatment for each individual disorder. In addition, those with a primary diagnosis of OCD had the option to complete a brief cognitive bias modification program designed to modify the tendency to interpret situations as being threatening, completed in the lab and at home for two weeks prior to the start of treatment. All patients were re-assessed repeatedly on all objective measures throughout treatment, and paid for participation.
Supported by: Internal Penn Undergraduate Research Mentorship (PURM) award (\$10, 000; \$7,000 in undergraduate RA stipend support over two summers, \$3,000 in equipment and participant payment costs).
 3. *Reliability and validity of brief tablet game screen for PTSD in children* (PI: **Asnaani**)
Years active: 2017 – 2019
Description: The purpose of this study was to examine how reliable and easy to use a tablet game that helps clinicians assess for PTSD symptoms was, and how well it performed in accurately detecting PTSD in children aged 8-12 years. This study built upon a previously funded study (PI: **Asnaani**, Grant: 8UL1TR000003) that examined the psychometric properties of the interviewer and self-reported version of the Child PTSD Symptom Scale for DSM-5 by providing the 6 most frequently endorsed items to create a brief screen of PTSD that was put into a creative format using a mobile game. This tablet game was designed using an interactive and animated game format to help make it less distressing to screen for PTSD in children. The research team went into two primary care clinics in South/West Philadelphia and two other child-treatment community psychology clinics to meet with potential child participants and their families, consenting them to the study if eligible/interested, and then administering the game with some paper and pencil forms.
 4. *Physical health outcomes in anxiety disorder treatment (PHIT study)* (PI: Brown)
Years active: 2017 - 2019
Description: The purpose of this study was to assess the acceptability of the Way To Health (WTH) patient portal in patients seeking anxiety disorder, PTSD, and OCD treatment. The WTH portal included data from the following: physical health indices from the Withings health monitor (a type of smart watch/Fitbit device) and nursing assessments, responses to electronic momentary assessment (eMA) text messaging prompts, self-report and clinician-interview symptom ratings, and

cognitive/psychophysiological assessments. This patient portal was used to measure and eventually promote physical and psychological health in patients. In this pilot study, we will compare the patient- and clinician-rated acceptability of the WTH portal to assessment as usual (AAU). AAU typically includes self-reported, objective and clinician-rated measures of psychological symptoms, i.e., the study procedures used in MTOCS (see #2 above).

Supported by: Institute for Translational Medicine and Therapeutics (ITMAT) at University of Pennsylvania (\$50, 000 in equipment costs, RA support, and participant payments)

Role: Co-Investigator
